**Paper:** Spring 2022 CPD Questions

**Personal Reflection:**

Reading of two papers regarding EVAR follow-up. Very interesting to read current research around EVARS and their follow-up as we are raising questions within our own department regarding the long-term follow-up ultrasound scanning of EVARS.

throughout COVID we have had a decline in compliance to patient follow-up scans and therefore it needs to be considered what follow-up schedule is necessary and useful for our patients.

Also interesting to read about CEUS and SMI as these are not techniques we use in our lab. I would like to research more around these topics and watch CEUS being performed by the radiologists in our hospital.
