A completed copy of this form is given to the student, after completion and signed by both assessors as a feedback sheet.

Summative Clinical Assessment results and feedback

Assessed by:

Clinical Mentor

Ultrasound Lecturer

Assessor's Feedback:-

Clair's arterial + carotid scans were confident in her knowledge

application of machine settings + adjustments required.

Clair's venous scan was 98% correct

in an anatomical variation (left system)

~~causing~~ causing problems for Clair to

identify correctly until a re scan was

asked for. However Clair did eventually

correctly identify this & could explain

what she could have done differently.

using machine settings more appropriately.

Result =

Pass/Fail (delete as appropriate)

Summative Clinical Assessment results and feedback

Assessed by:

Clinical Mentor

Carole Tennison

Ultrasound Lecturer

Kirsta Gordon

Assessor's Feedback:-

Claire 1st two patients were confidently assessed, with good communication, dynamic assessment and correct diagnostic report produced.
Claire struggled on the 3rd patient, with the pupliteal system being bit hard - and not adequately utilising the machine settings to evaluate this adequately, however Claire did come to the correct diagnosis and identifying pathology within this report and brought discussion.

Result =

Pass/Fail (delete as appropriate)

Clearly understand the implications of a bit hard system and what this entailed.
Moving forward Claire needs to utilise her equipment settings, correctly take representative images rather than expected images and to think more laterally. Overall: Outcome: PASS.
