

**Simon Hartley** has completed this personal reflection on **19/01/2020**

**Paper:** Autumn 2019 CPD Questions

**Personal Reflection:**

The second paper concerning VBA calcification has very limited direct ultrasound application due to the limited views of these vessels on ultrasound.

The first paper demonstrates the arterial side effects of radiation therapy, particularly the high incidence of stenosis and the diffuse nature of the resulting disease and its fibrotic, rather than inflammatory, nature. Does the same occur in the adjacent vein or is the effect limited to the artery.
