Paper: Winter CPD Questions 2020

Personal Reflection:

I have doubts about the validity of the proffered papers use of Esaote ultrasound machines in Paper 1 suggests a degree of inherent bias. It seems that there are still some in the Vascular imaging community who want to harp back to days gone by .

Zambonis work in IJV reflux was not well received by the SVT ... hence its odd to see him quoted as a source here

Going forward Ultrasound will have to be used - its more a case of who is going to do the ultrasound
