Paper: Winter CPD Questions 2020

Personal Reflection:

Perforators paper: It was good to read of other technology to assess for reflux. Also that the recommendations are that PV are not routinely treated in uncomplicated varicose veins. In addition they would treat PV if next to or associated with an ulcer. I did a scan the other day with an incompetent perforator and an ulcer, seemed to be the main source of the ulcer.

Tilt-table Paper: In our vascular lab we have recently purchased a tilt table, so it was good to read other uses for it in research. Also how the tilt table could be used with air plethysmography.
