

**Eleanor Walker** has completed this personal reflection on **06/08/2020**

**Paper:** Summer 2020 CPD Questions

**Personal Reflection:**

The article 'Patients with isolated PE in comparison to those with DVT. Differences in characteristics and clinical evolution' is statistically number heavy but does highlight some very interesting findings and our department only scans symptomatic legs and we would not scan the legs of patients with confirmed isolated PE routinely. This won't change our practice but the article is interesting.

Article 'Different management options for primary varicose veins in females: A prospective study' is interesting to see the sample results for the various treatment groups. This is a group of patients that we do no surveillance on and it is educationally beneficial to see the long term outcome variation in success rates.
