Paper: Spring 2024 CPD Questions

Personal Reflection:

Paper 1 is of relevance to my mixed vascular-head/neck practice as the styloid process is readily apparent when scanning head/neck patients. We do not have TCD probes available, although I have extensive experience of TCD monitoring and imaging in previous employment.

Paper 2 is a good overview of a not uncommon presentation in vascular ultrasound (even though the prevalence is $<1/25$ of $1/25000$ - unsure if the options in the CPD paper covers this prevalence).
