

Victoria Bautista has completed this personal reflection on **25/08/2024**

Paper: Winter 2022/23 CPD questions

Personal Reflection:

Arteriovenous Haemodialysis Access Stenosis Diagnosed by Duplex Doppler Ultrasonography:

Understanding AVF and AVG haemodynamics and the affects of stenosis on blood flow.

Understanding of aetiology and types of stenoses that play a role in the development of access stenosis.

Understanding predilectional sites of stenosis in AVF and AVG.

Understanding definition of significant stenosis by US.

AV access surveillance by US.

Symptoms of AVF/AGV is and need for intervention.

Duplex is inexpensive, non-invasive and precise in the assessment of AVF and AVF.

Article was very informative.

Will Implement the information that I have gained into my daily practice.

Medium Term Outcomes of Deep Venous Stenting in the Management of Venous Thoracic Outlet Syndrome:

Medium term patency rates limb stenting following surgical decompression in vTOS management is promising.

Duplex is effective in showing patency in pre and post angioplasty and upper limb vein stenting.

Will Implement the information that I have gained into my daily practice.
