

Victoria Bautista has completed this personal reflection on **29/08/2024**

Paper: Winter 2023/24 CPD questions

Personal Reflection:

Use of US and coloured Doppler in diagnosis and classification of superficial soft tissue vascular anomalies. Interesting article of how to differentiate between vascular tumours and vascular malformations using B mode to assess tissue appearance, and colour Doppler / spectral Doppler to assess flow in lesion. Will implement this in my practise.

Interesting article on transcatheter arterialisation of the deep veins of patients with non-healing ulcers and no surgical or endovascular revascularisation options to prevent above ankle revascularisation treatment options.
