Paper: Spring 2019 CPD Questions

Personal Reflection:

Spring 2019 CPD questions based on 2 interesting papers (Outcomes of Endovenous Laser Ablation in patients with active and healed venous ulcers and Factors associated with contralateral DVT after Iliocaval venous stenting).

I found the paper on EVLA very interesting as it was more relevant to my practice. Especially the DUS section and how reflux is classified. I realise it is easy to put in the wrong answers when adding them to the computer system which is frustrating when you knew the right answer in the first place. I will check my inputted answers carefully in future.
