

**Nicola Sutcliffe** has completed this personal reflection on **04/03/2019**

**Paper:** Winter 2019 CPD Questions

**Personal Reflection:**

I answered questions based on 2 research papers related to Anomalous ICA branch detection and Safety of early carotid artery stenting.

I enjoyed locating the answers and found both papers useful as I do scan carotid arteries. I felt it updated my knowledge.

I found the paper about anomalous branches of the ICA very interesting as I have not heard of this before. I noted the limitations of the study and realise I need to re read this paper. It has made me think about if I can see any ICA branches it may be possible rather than dismissing they exist.

My action plan is to re-read the article and to see if I come across any ICA branches in the future. I also will discuss with colleagues for their opinions.
