Scientist: Suleman Choudhury

Right anterior thigh vein:
Proximal thigh measures a range of 2.9-6.6mm

The anterior thigh vein
Lies straight and within the fascia for the first 10cm before becoming varicose.

The SFJ and anterior thigh vein is patent and incompetent. The anterior thigh vein fills a varicose (5mm) vein in the proximal thigh and courses medially to the foot.

The thigh GSV was absent most probably due to previous varicose vein surgery. The GSV in the calf is patent and competent throughout.

The SPJ and SSV were patent and competent.

No incompetent perforators detected. All deep veins are patent and competent.
