**CONCLUSION:**

demonstrated
 Duplex ultrasound-mixed echo plaque in the left internal carotid artery causing moderate stenosis - Minor fibrous thickening detected in the right internal carotid artery. Asymmetrical waveforms detected in vertebral arteries, right vertebral artery > left vertebral artery. Subclavian artery waveforms were within normal range.

1. Mixed echo plaque in (L) ICA causing moderate stenosis, 50-79% (neither 50%).
2. Minor disease detected in (R) ICA, 1-15%.
