

Post-OP duplex:

Duplex scanning demonstrated patent right common and internal carotid arteries post patch endarterectomy. There was minor plaque in the internal carotid artery just distal to patch and moderate narrowing distally.

Conclusion:

1. (R) ICA and CCA patent post patch endarterectomy.
2. Plaque in (R) ICA just distal to patch causing minor disease, 16-49% (nearer 30%) and elevated velocities distally suggesting moderate narrowing, 16-49% (nearer 49%).

Next planned surveillance scan:

September 2021.
