

**24/06/2021, 15:26, UA Carotid and Vertebral**

Duplex scanning demonstrated minor calcified plaque in both internal carotid arteries. Vertebral and subclavian artery velocities were within the normal range bilaterally.

**Conclusion:**

1. Minor (L) ICA disease, 16-49% (nearer 30%).
2. Minor (R) ICA disease, 16-49% (nearer 20%).
