

**22/06/2021, 11:53, UA Carotid and Vertebral**

Duplex scanning demonstrated intimal thickening in left and minor plaque in the right internal carotid arteries. Vertebral and subclavian artery velocities were within the normal range bilaterally.

**Conclusion:**

1. Minor (L) ICA disease, 1-15%.
2. Minor (R) ICA disease, 16-49% (nearer 20%).
