

05/08/2021, 11:57, UA Carotid and Vertebral

Duplex scanning demonstrated mixed echo plaque in both carotid artery origins causing a moderate stenosis on the left and minor disease on the right. Vertebral and subclavian artery velocities were within the normal range bilaterally.

Conclusion:

1. (L) ICA moderate stenosis, 50-79% (nearer 50%). Plaque type: mixed; plaque length 13mm and distal ICA diameter 5.2mm.
2. Minor (R) ICA disease, 16-49% (nearer 30%).
