

**30/07/2021, 12:51, UA Carotid and Vertebral**

Duplex scanning demonstrated mixed echo plaque in both internal carotid arteries causing a moderate stenosis on the right and moderate disease on the left. Vertebral and subclavian artery velocities were within the normal range bilaterally.

**Conclusion:**

1. Moderate (R) ICA stenosis, 50-79% (nearer 50%).
2. Moderate (L) ICA disease, 16-49% (nearer 49%).
