The deep venous system is patent and competent from CFV-POPV.

The SFJ is patent and competent. The LSV is occluded from the SFJ and remains occluded to the distal thigh, consistent with previous RFA. The proximal-mid calf LSV is patent and incompetent, measuring 3.3mm in diameter. The LSV is competent at the ankle. There are no obvious varicose veins.

Perforator noted in the proximal calf, unable to demonstrate any obvious incompetence. There are two further perforators in the mid and distal calf, these appear to be competent.

The SPJ was not identified. Competent Giacomini. The SSV is competent throughout its length.
