PERIPHERAL ARTERIAL DUPLEX REPORT : 25/04/2023

TO :

RE :

Tested By : MR JASON MAPANO

Test Date : 25/04/2023 Requested Date : 01/03/2023

Indication : IC

PSV1 max
(cm/sec)

Common Femoral L : 142
Popliteal L : 62
Crural L : 47

Comments : Left foot pain on exertion

Left arterial duplex scan LE

Short segment total occlusion in the AK segment of the SFA.

Severe stenosis (>90% stenosis) in the proximal segment of the SFA.

Moderate stenosis (>50% stenosis) in the mid SFA.

Reconstitution of flow in the AK segment of the SFA with low PSV and monophasic waveform until the crural vessels.

The CFA and PFA are patent with normal PSV and triphasic waveform.

Note:

The left GSV (groin to ankle) is linear with >3 mm in diameter suitable for conduit.
