PERIPHERAL ARTERIAL DUPLEX REPORT : 08/06/2023

TO :

RE :

Tested By : 
Test Date : 28/03/2023

Indication : Other

Comments : Attended vas lab to see nurses in regards to swelling upper leg and wound management.
Ross Latham also present.

Scan of area in thigh of ?swelling- looks like a seroma with no flow inside -some loculated areas. The graft does run over this area and has biphasic flow, normal range vels. The area of seroma does not appear to connect into the wound AK.
Scanned on portable (samsung)

Tested By : MR JASON MAPANO

Test Date : 08/06/2023

Requested Date : 08/06/2023

Indication : Graft Surveillance

PSV1 max
(cm/sec)

Super Femoral L : 72
Crural L : 62 Graft L
: 139

Comments : Left popliteal artery aneurysm repair. March 2023.

Left ABI 160/150: 1.06 (normal).

Left arterial duplex scan LE

The entire graft including the anastomosis of the graft is patent with normal PSV and with triphasic waveform.

Anterior tibial artery is patent with normal PSV and triphasic waveform.

CFA, PFA and proximal segment of the SFA are patent with normal PSV and triphasic waveform.

Note:

Follow-up graft surveillance 3/12 due September 2023.
