

Clinical Indication: ? stenosis Clinical History: suspected tia

Findings:

EXTRACRANIAL CAROTID AND VERTEBRAL ARTERIAL DUPLEX

Right

PSV/EDV (cm/s)

CCA - 45/5

ICA - 30/6

Left

PSV/EDV (cm/s)

CCA - 55/8

ICA - 30/8

Bilaterally

Smooth calcified plaque in the distal CCA caused a 1-29% stenosis. There is otherwise no evidence of stenoses or plaque within the extracranial carotid artery tree.

The vertebral arteries were patent with normal antegrade flow.
