

## Clinical Details

### Report

**150448420 11/05/2023 US Doppler lower limb veins Both** Recurrent Varicose veins.

This patient has now developed deep vein incompetence bilaterally and known to have tricuspid valve incompetence as well.

Raised central venous pressure has caused over distension of deep veins and lead to further development of recurrent varicose veins.

Both sides

Incompetent recuurent veins arising from SFJ are feeding varicose veins in thigh and calf on both sides.

Tortuous and diameter ranges from 6.7mm to 16.0mm .
