Distal anastomosis - patent with monophasic waveforms, PSV 209cm/s.

PopA - patent with monophasic waveforms, PSV 49cm/s.

ATA and PTA - patent and heavily calcified, monophasic waveforms, PSV 48cm/s and 79cm/s, respectively.

Resting ABPI is within normal limits in the right.
Unable to obtain ABPI in the left due to poor signal strength.

PTA - Posterior Tibial Artery PeR A - Peroneal Artery ATA - Anterior Tibial Artery

PopA - occluded.

ATA and PTA - heavily calcified, however patent at the ankle with weak monophasic waveforms, PSV 27cm/s and 26cm/s respectively.

Resting right ABPI is falsely elevated due to calcification. Resting left ABPI is reduced.

Distal vessel (previous CIA reconstruction) appears widely patent with biphasic waveforms, PSV 60cm/s.

IIA Graft - proximal anastomosis is widely patent with triphasic waveforms, PSV 68cm/s. Prox-distal graft appears patent with triphasic waveforms, PSV 78-67cm/s. Distal anastomosis was not visualised due to vessel depth.

CIA>CFA Graft - widely patent along its length with bi/triphasic waveforms, PSV 60-54-69cm/s. Distal anastomosis - widely patent with triphasic waveforms, PSV 54cm/s.

CFA - patent with good triphasic flow, PSV 82cm/s.

PLEASE HIGHLIGHT TO MR NICHOLAS TO ARRANGE FOLLOW-UP SURVEILLANCE SCAN.

CFA - patent with triphasic waveforms, PSV 193cm/s.

PFA (origin) - patent with biphasic waveforms, PSV 94cm/s.

SFA - patent in the prox-mid vessel with mild dense disease, triphasic waveforms, PSV 150-152cm/s. Mild stenosis (extending for ~2.58cm) noted in the mid vessel with no elevated velocities noted. Distal vessel is calcified with monophasic waveforms, PSV 127cm/s.

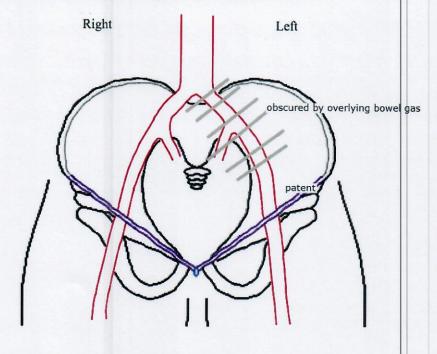

PopA - patent and calcified with monophasic waveforms, PSV 107-73cm/s.

TPT - calcified with evidence of at least 2x vessel run off identified.

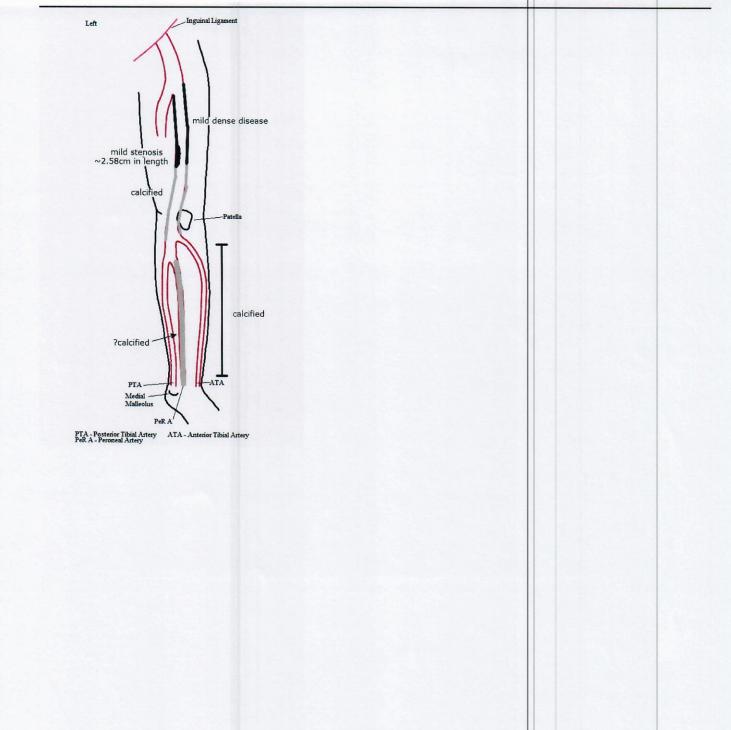

ATA and PTA - patent and calcified, monophasic waveforms, PSV 45cm/s and 78cm/s, respectively.

PerA - no flow identified ?calcified.

Resting ABPI is within normal limits in the right and reduced in the left.

CFA - patent with triphasic waveforms, PSV 122cm/s.

PFA - patent with triphasic waveforms, PSV 94cm/s.

SFA - patent with mild dense disease in the prox-mid vessel with triphasic waveforms, PSV 50-45cm/s. Severe focal stenosis identified in the mid thigh at 61cm, with velocities increasing from PSV 45cm/s to PSV 484cm/s. Stenosis extends for a length of 4cm. Distal to the stenosis, vessel remains patent with mild calcified disease, monophasic waveforms, PSV 31cm/s.

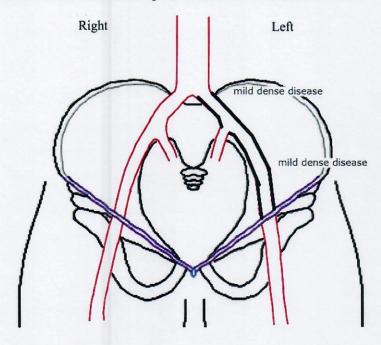

PopA - patent with mild dense and calcified disease, monophasic waveforms, PSV 31-37cm/s.

TPT - patent and calcified with evidence of at least 2x vessel run off identified.

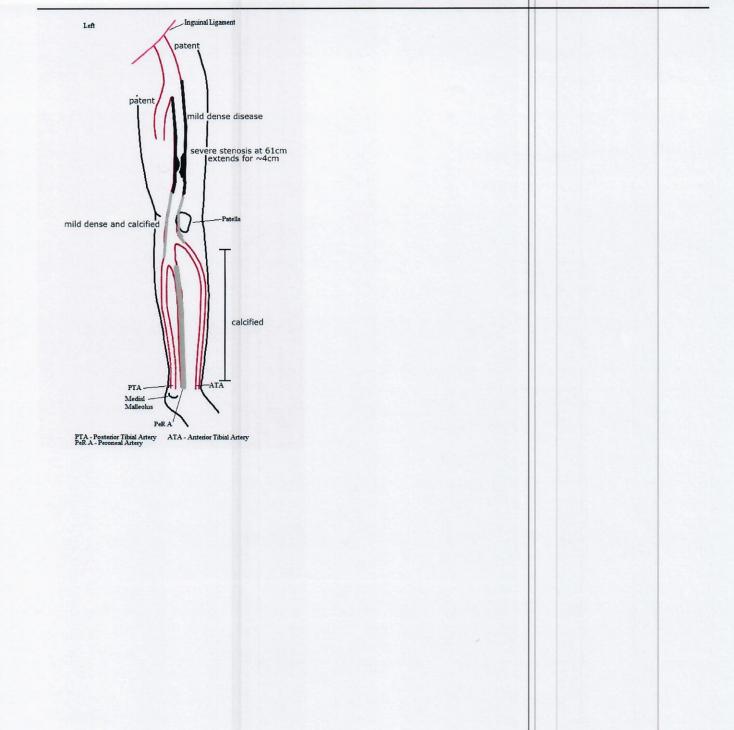

ATA and PTA - calcified, however patent at the ankle with monophasic waveforms, PSV 23cm/s and 36cm/s respectively.

PerA - no flow identified ?calcified ?patency.

Resting ABPI is within normal limits in the right and reduced in the left lower limb.

CFA - patent with mild disease, triphasic waveforms, PSV 221cm/s

PFA (origin) - patent with triphasic waveforms, PSV 162cm/s

SFA - patent with mild dense and calcified disease, triphasic waveforms, PSV 150-84cm/s. Vessel is obscured in the mid thigh from 49-46cm (prox to medial malleolus) - triphasic waveforms obtained distal to the obscured area suggests no haemodynamically significant disease within obscured region. Distal vessel is calcified with biphasic waveforms, PSV 51cm/s.

PopA - proximal vessel poorly visualised and heavily calcified, no flow identified with collateral vessels noted. Where seen, proximal vessel appears occluded. Mid vessel is patent and calcified with reduced monophasic waveforms, PSV 20cm/s.

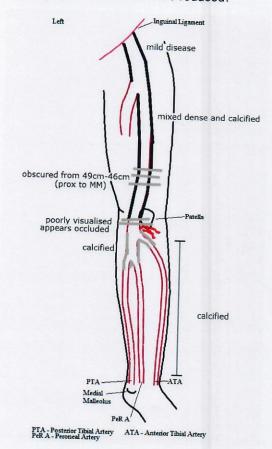

TPT - patent and calcified with evidence of at least 1x vessel run-off identified.

ATA - patent and calcified, monophasic waveforms, PSV 42cm/s.

PTA - patent and calcified, monophasic waveforms, PSV 27cm/s.

PerA - patent and calcified, monophasic waveforms, PSV 17cm/s.

Resting right and left ABPI are reduced.

CFA - patent with mild-moderate dense and calcified disease, turbulent triphasic waveforms, PSV 235cm/s.

PFA - patent with mild dense and calcified disease, slightly turbulent triphasic waveforms, PSV 246cm/s.

SFA - patent proximally with moderate dense and calcified disease, biphasic waveforms, PSV 58cm/s.

Vessel occludes in the proximal thigh at 73cm (~11cm from the groin), and reforms in the distal thigh at 49cm. Distal vessel/adductor canal is patent with dense and calcified disease, reduced monophasic waveforms, PSV 22-34cm/s.

PopA - patent and calcified with reduced monophasic waveforms, PSV 47-37cm/s.

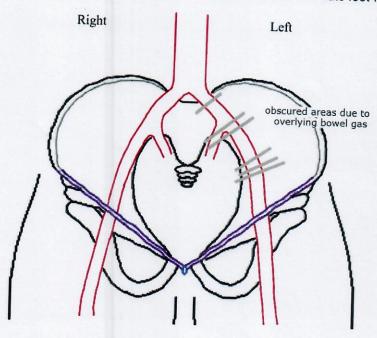

TPT - patent and calcified with evidence of at least 2x vessel run off identified.

ATA and PTA - heavily calcified, however patent at the ankle with reduced monophasic waveforms, PSV 9cm/s and 12cm/s, respectively.

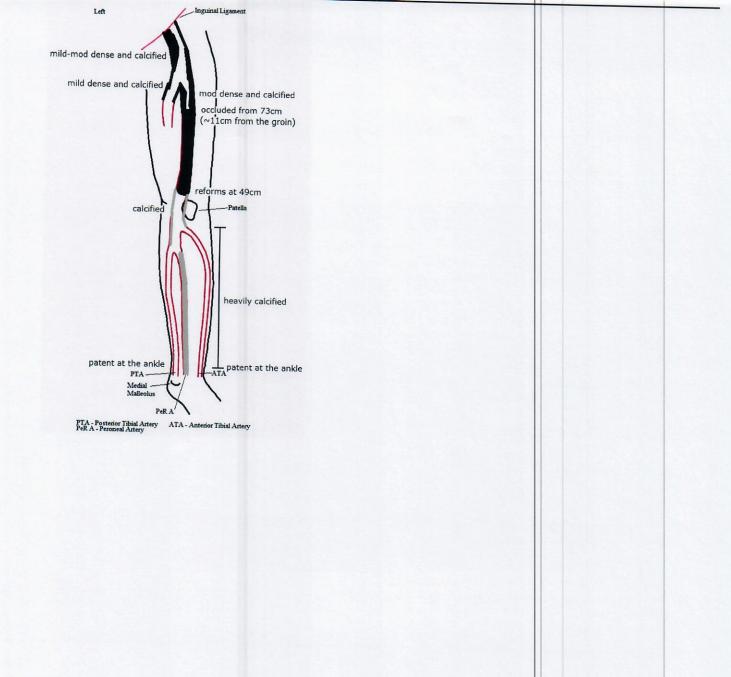

PerA - no flow identified ?patency ?calcified.

Resting ABPI is reduced in the right lower limb.

Resting left ABPI is borderline reduced and becomes reduced after a 1 minute foot-flex exercise challenge.

CFA - patent with mild dense disease, mono/triphasic waveforms, PSV 261cm/s.

PFA - patent with biphasic waveforms, PSV 162cm/s.

SFA - patent in the prox-mid vessel with mild dense disease, biphasic waveforms, PSV 115cm/s. Disease becomes moderate and calcified in the mid-distal vessel with monophasic waveforms, P\$V 175-86cm/s. PopA - patent and calcified with monophasic waveforms, PSV 55cm/s.

TPT - patent and calcified with evidence of at least 2x vessel run off identified.

ATA and PTA - patent and calcified, monophasic waveforms, PSV 31cm/s and 30cm/s, respectively. PerA - no flow identified ?calcified.

## LEFT

CIA - not visualised due to overlying bowel gas and patient discomfort.

EIA - poorly visualised, however elevated velocities obtained in the proximal vessel with turbulent monophasic waveforms, PSV 548cm/s - suggestive of at least a mod-severe stenosis. Mid-distal vessel remains patent with moderate turbulent monophasic waveforms, PSV 152cm/s.

CFA - patent with mild dense disease, monophasic waveforms, PSV 121cm/s.

PFA - patent with monophasic waveforms, PSV 130cm/s.

SFA - patent with mild dense and calcified disease, monophasic waveforms, PSV 82cm/s Disease becomes mod-severe in the prox-mid thigh at 66cm, monophasic waveforms, PSV 74-157cm/s pre-occlusive trickle flow noted. No flow identified in the prox-mid thigh at 64cm ?calcified ?occluded. Trickle flow noted in the mid thigh at 57cm and reforms the vessel distally with moderate dense and calcified disease, reduced monophasic waveforms, PSV 47cm/s.

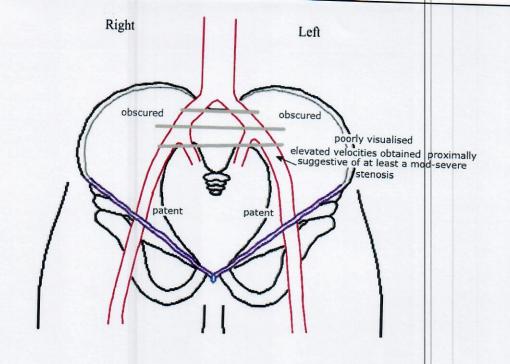

PopA - patent and calcified with monophasic waveforms, PSV 52cm/s.

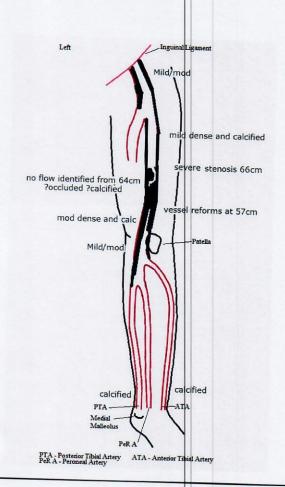

TPT - patent and calcified with evidence of at least 2x vessel run off identified.

ATA and PTA - patent and calcified, monophasic waveforms, PSV 20cm/s and 24cm/s, respectively. PerA - no flow identified ?calcified.

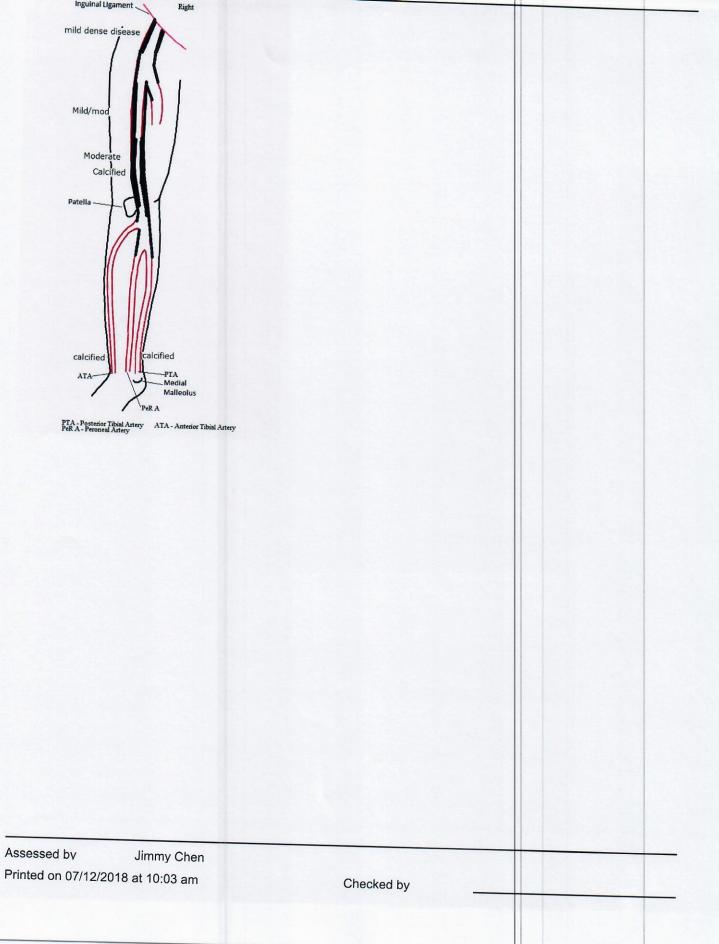

Resting ABPI is reduced in the right and significantly reduced in the left lower limb.

CFA - patent with mild dense disease, triphasic waveforms, PSV 76cm/s.

PFA (origin) - patent with triphasic waveforms, PSV 63cm/s.

SFA - prox-mid vessel is patent with mild dense disease, triphasic waveforms, PSV 70-59cm/s. Mid-distal vessel becomes calcified, however triphasic waveforms obtained, PSV 64cm/s.

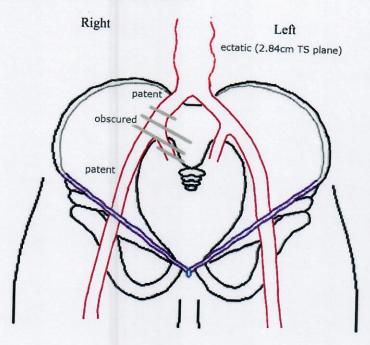

PopA - patent and calcified, triphasic waveforms, PSV 31cm/s.

TPT - patent and calcified, evidence of 3x vessel run off identified.

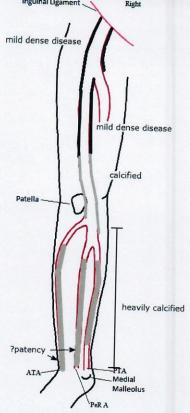

ATA - patent proximally with biphasic waveforms, PSV 36cm/s. Mid-distal vessel is heavily calcified with no flow obtained at the ankle ?patency.

PTA - heavily calcified, however patent at the ankle with biphasic waveforms, PSV 22cm/s.

Resting right and left ABPI are borderline reduced.

EIA – prox-mid vessel not visualised due to associated vessel depth and patient discomfort. Patent in the distal vessel with good triphasic flow, PSV 103cm/s. CFA - Patent with mild dense and calcified disease, triphasic flow, PSV 139cm/s. PFA (origin) - patent with biphasic flow, PSV 116cm/s. SFA - patent in the prox-mid vessel with dense and calcified disease, tri-biphasic waveforms, PSV 116-76cm/s. No flow identified in the distal vessel/adductor canal ?due to heavy calcification. POP - Prox vessel poorly visualised - unable to exclude significant stenosis/disease from these images. Distal vessel is patent and calcified with mono/triphasic waveforms, PSV 57-64cm/s. TPT - calcified, evidence of at least 1 vessel run off identified. ATA - no flow identified ?patency ?calcified. PTA – heavily calcified, however patent in the mid calf with monophasic waveforms, PSV 47cm/s. PerA - no flow identified ?patency ?calcified. LEFT CIA - not visualised due to associated vessel depth. EIA - prox-mid vessel not visualised due to associated vessel depth and patient discomfort. Patent in the distal vessel with good triphasic flow, PSV 116cm/s. CFA - Patent with mild dense and calcified disease, triphasic flow, PSV 114cm/s. PFA (origin) - patent with biphasic flow, PSV 72cm/s. SFA - patent in the prox vessel with dense and calcified disease, triphasic waveforms, P\$V 88cm/s. Multiple obscured areas in the mid-distal vessel due to extensive calcification, where seen vessel is patent with mono/triphasic waveforms, PSV 112-80cm/s - unable to fully exclude signficant stendsis/disease within obscured areas. POP – patent and calcified with triphasic waveforms, PSV 63cm/s. TPT - calcified ?patency ATA - no flow identified ?patency ?calcified. PTA - no flow identified, however reduced monophasic waveforms obtained using HHD. PerA - no flow identified ?patency ?calcified. Resting right and left ABPI are falsely elevated due to calcified crural vessels. Assessed by Jimmy Chen Printed on 07/12/2018 at 10:10 am Checked by

CFA - patent with triphasic waveforms, PSV 158cm/s.

PFA - patent with biphasic waveforms, PSV 117cm/s.

SFA - patent with mild dense and calcified disease, biphasic waveforms, PSV 98-92-61cm/s.

PopA - patent and calcified, biphasic waveforms, PSV 53cm/s.

TPT - patent and calcified with evidence of 3x vessel run off identified.

ATA and PTA - patent and mildly calcified, bi/triphasic waveforms, PSV 56cm/s and 91cm/s, respectively. PerA - no flow identified ?calcified.

## LEFT

CIA - Not adequately visualised due to vessel movement with respiration and overlying bowel gas.

EIA - patent with biphasic waveforms, PSV 181-129cm/s.

CFA - patent with triphasic waveforms, PSV 158cm/s.

PFA - patent with biphasic waveforms, PSV 117cm/s.

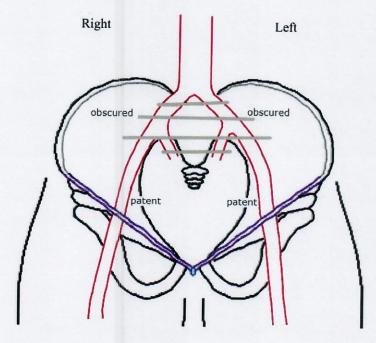

SFA - patent in the prox-mid vessel with mild dense and calcified disease, biphasic waveforms, PSV 71cm/s. Mid-distal vessel becomes heavily calcified with the mid vessel being obscured for a length of 3.12cm, however waveforms obtained distal to this remain biphasic, PSV 78-55cm/s.

PopA - patent and calcified, biphasic waveforms, PSV 58cm/s.

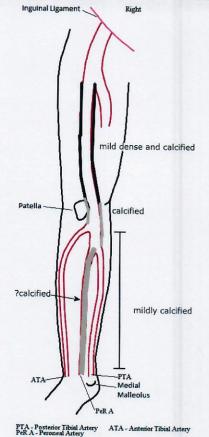

TPT - patent and calcified with evidence of 2x vessel run off identified.

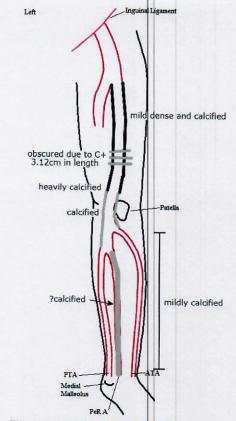

ATA and PTA - patent and mildly calcified, triphasic waveforms, PSV 68cm/s and 61cm/s, respectively. PerA - no flow identified ?calcified.

Resting right and left ABPI are within normal limits and remain so following a 1 minute foot-flex exercise challenge.

CFA - patent with slightly reduced biphasic waveforms, PSV 88cm/s.

PFA (origin) - patent with slightly reduced biphasic waveforms, PSV 45cm/s.

SFA - patent in the prox-mid vessel with mild dense and calcified disease, slightly reduced biphasic waveforms, PSV 56-57cm/s. Distal vessel/adductor canal is heavily calcified with slightly reduced biphasic waveforms, PSV 47cm/s.

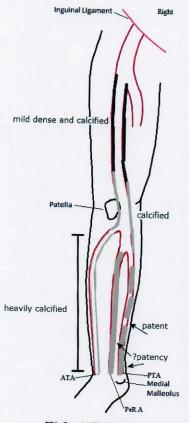

PopA - patent and calcified, slightly reduced biphasic waveforms, PSV 37cm/s.

TPT - patent and calcified, evidence of 3x vessel run off identied.

ATA - patent and heavily calcified, monophasic waveforms, PSV 143cm/s.

PTA - heavily calcified however vessel appears patent in the mid calf with monophasic waveforms, PSV 40cm/s. No flow identified at the ankle ?calcified ?patency.

Resting right and left ABPI are falsely elevated due to calcified crural vessels.

PTA - Posterior Tibial Artery ATA - Anterior Tibial Artery PeR A - Peroneal Artery

EIA -prox-mid vessel not visualised due to overlying bowel gas. Distal vessel is patent with triphasic waveforms, PSV 101cm/s.

CFA - patent with triphasic waveforms, PSV 91cm/s.

PFA (origin) - patent with triphasic waveforms, PSV 114cm/s.

SFA - patent in the prox vessel with triphasic waveforms, PSV 114cm/s. Waveforms become monophasic in the mid-distal vessel with no evidence of significant disease identified. PSV 76-117cm/s. Vessel becomes calcified in the adductor canal.

PopA - patent and calcified with monophasic waveforms, PSV 85-96cm/s.

TPT - calcified with evidence of 2x vessel run off identified.

ATA and PTA - calcified, however patent with monophasic waveforms, PSV 43cm/s and 127cm/s, respectively.

PerA - no flow identified ?calcified.

## LEFT

CIA - prox vessel is patent with biphasic waveforms, PSV 92cm/s. Mid-distal vessel not adequately visualised due to overlying bowel gas.

EIA -prox-mid vessel not visualised due to overlying bowel gas. Distal vessel is patent with triphasic waveforms, PSV 127cm/s.

CFA - patent with triphasic waveforms, PSV 166cm/s.

PFA (origin) - patent with triphasic waveforms, PSV 55cm/s.

SFA - patent with monophasic waveforms, no evidence of significant disease identified along length. PSV 87-162-126cm/s. Vessel becomes calcified in the adductor canal.

PopA - patent and calcified with monophasic waveforms, PSV 105-98cm/s.

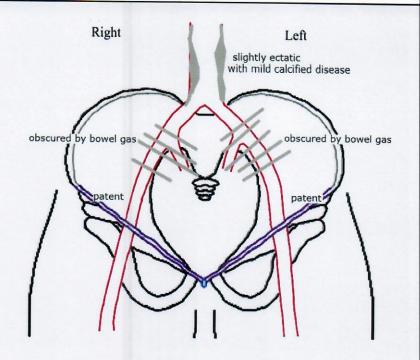

TPT - calcified with evidence of 2x vessel run off identified.

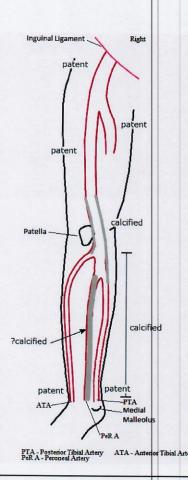

ATA and PTA - calcified, however patent with monophasic waveforms, PSV 29cm/s and 115cm/s, respectively.

PerA - no flow identified ?calcified.

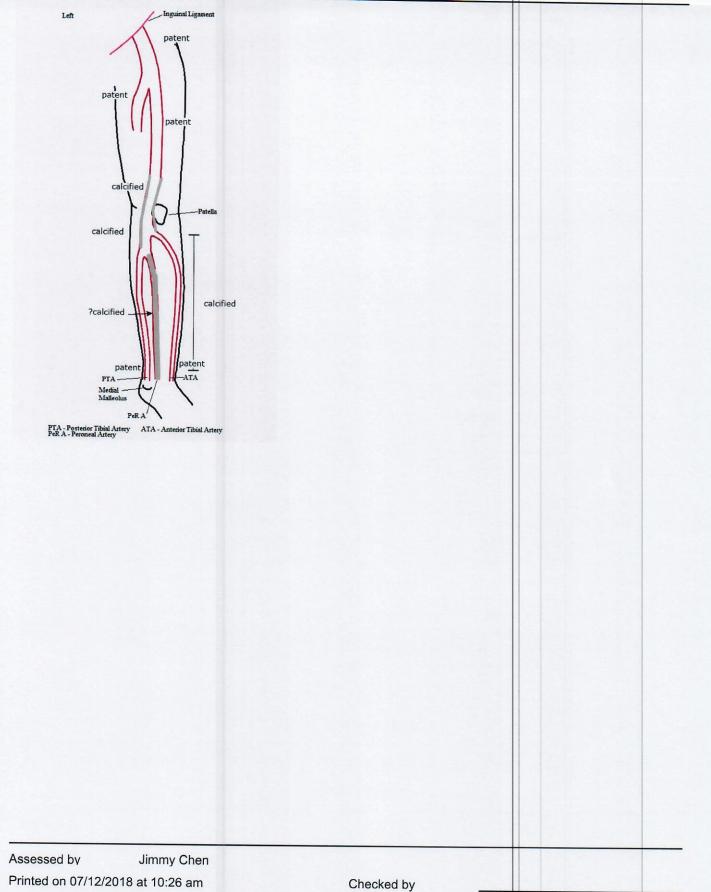

Resting right and left ABPI are within normal limits and remains so following a 1 minute foot-flex exercise challenge.

EIA – prox-mid vessel not visualised due to associated vessel depth and patient discomfort. Patent in the distal vessel with good triphasic flow, PSV 103cm/s. CFA - Patent with mild dense and calcified disease, triphasic flow, PSV 139cm/s.

PFA (origin) - patent with biphasic flow, PSV 116cm/s.

SFA - patent in the prox-mid vessel with dense and calcified disease, tri-biphasic waveforms, PSV 116-76cm/s. No flow identified in the distal vessel/adductor canal ?due to heavy calcification.

POP - Prox vessel poorly visualised - unable to exclude significant stenosis/disease from these images.

Distal vessel is patent and calcified with mono/triphasic waveforms, PSV 57-64cm/s.

TPT - calcified, evidence of at least 1 vessel run off identified.

ATA - no flow identified ?patency ?calcified.

PTA - heavily calcified, however patent in the mid calf with monophasic waveforms, PSV 47cm/s.

PerA - no flow identified ?patency ?calcified.

## LEFT

CIA - not visualised due to associated vessel depth.

EIA - prox-mid vessel not visualised due to associated vessel depth and patient discomfort. Patent in the distal vessel with good triphasic flow, PSV 116cm/s.

CFA - Patent with mild dense and calcified disease, triphasic flow, PSV 114cm/s.

PFA (origin) - patent with biphasic flow, PSV 72cm/s.

SFA - patent in the prox vessel with dense and calcified disease, triphasic waveforms, PSV 88cm/s. Multiple obscured areas in the mid-distal vessel due to extensive calcification, where seen vessel is patent with mono/triphasic waveforms, PSV 112-80cm/s - unable to fully exclude signficant stenosis/disease within obscured areas.

POP - patent and calcified with triphasic waveforms, PSV 63cm/s.

TPT - calcified ?patency

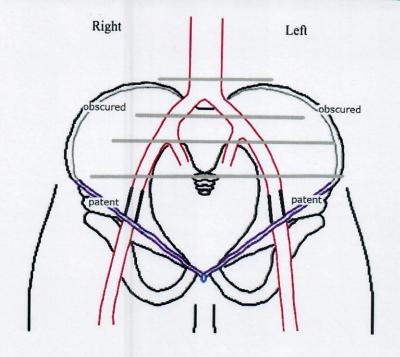

ATA - no flow identified ?patency ?calcified.

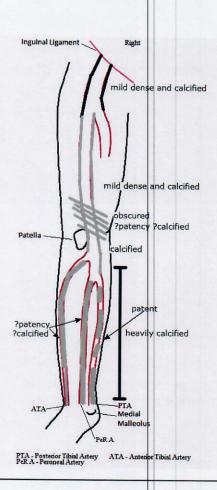

PTA – no flow identified, however reduced monophasic waveforms obtained using HHD.

PerA - no flow identified ?patency ?calcified.

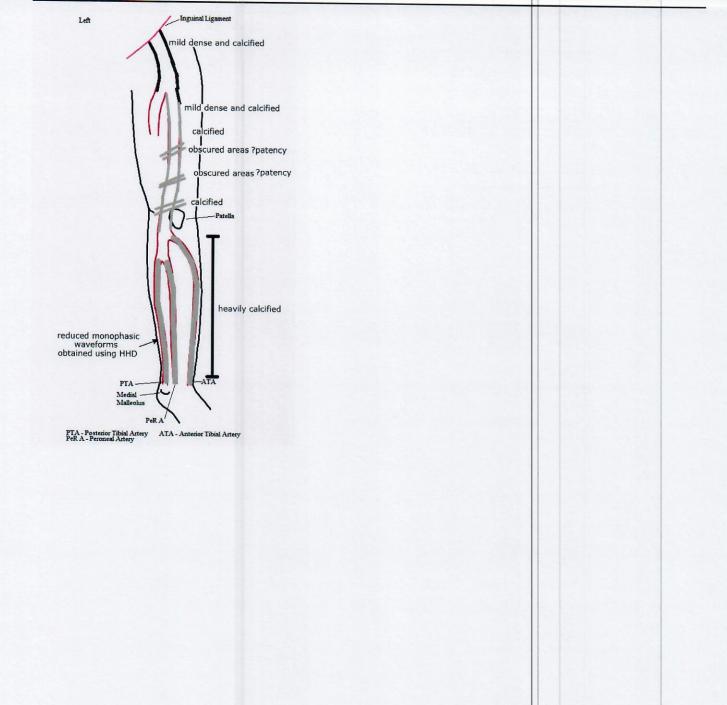

Resting right and left ABPI are falsely elevated due to calcified crural vessels.
