D.O.B. **05/01/1961**

NHS No **476 302 0919**  
Patient Ref **5202686**

**Reason** Varicose vein  
**Outcome** Incompetence, Superficial thrombophlebitis

	<b>Right</b>		<b>Left</b>	
<b>Deep Veins</b>	<b>Patency</b>	<b>Competency</b>	<b>Patency</b>	<b>Competency</b>
Common Iliac Vein				
External Iliac Vein				
Internal Iliac Vein				
Common Femoral Vein			Widely Patent	Competent
Profunda Vein			Widely Patent	Competent
Superficial Femoral Vein			Widely Patent	Competent
Popliteal Vein			Widely Patent	Competent
Posterior Tibial Vein			Widely Patent	Competent
Anterior Tibial Vein			Widely Patent	Competent
Peroneal Vein			Widely Patent	Competent
Soleal Vein			Patent	
Gastrocnemius			Patent	
<b>Superficial Veins</b>				
Saphenofemoral Junction			Patent	Competent
L Saphenous Vein Above			Not Identified	
L Saphenous Vein Below			see notes	
Vein of Giacomini			Not Identified	
Saphenopopiteal Junction			Patent	Competent
S Saphenous Vein			Patent	Competent
<b>Evidence of D.V.T.</b>				
Above the knee			No	
Popliteal			No	
Below the knee			No	

## Notes

### LEFT LOWER LIMB VENOUS DUPLEX ASSESSMENT

Iliac veins not viewed. Flow in the common femoral vein is phasic with respiration and responds normally to a Valsalva manoeuvre, suggesting proximal vein patency. All visualised deep veins appear widely patent and competent with no evidence of previous DVT.

All measurements are proximal to the medial malleolus unless otherwise stated.

Sapheno-femoral junction (SFJ) is competent. Long Saphenous vein (LSV) not identified in the thigh. A competent perforator noted in the thigh at 66cm, which gives rise to thigh varicosities. One of the varicosities tracks to the mid calf, reforming the LSV at 25cm. The LSV remains incompetent to the ankle and appears small calibre in the distal calf. Isolated occlusive superficial thrombophlebitis noted in 1 x

varicosities in the mid thigh.  
A competent anterior thigh vein noted.

SSV forms a competent common junction with a pair of gastrocnemius vein into the popliteal vein.
